

# CAP4LAND

## A STRUCTURING INITIATIVE FOR LAND FORCES

By Pôle MecaTech

CAP4LAND is a strategic program developed in partnership with the **Belgian Defence**. Its objective is to **bring together, coordinate, and support the federal industrial ecosystem** active in the field of land forces. Together with this ecosystem and the Belgian Defence, **we aim to build a shared short- and long-term vision of our technological and capability ambitions.**

In response to technological and industrial challenges, CAP4LAND seeks to strengthen **value chain coherence**, stimulate innovation, and foster synergies among the various stakeholders in the sector.

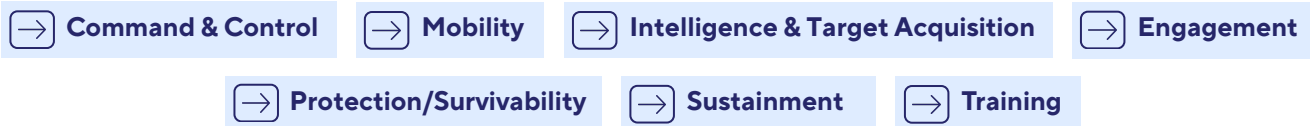

### THE ROLE OF PÔLE MECATECH

As a project partner, Pôle MecaTech is involved at two key levels :

- **Development of a technological roadmap in the land domain :**
  - assess existing technologies, value chains, and capabilities,
  - identify technological and capability needs together with the Belgian Defence and the ecosystem,
  - formalize and plan the deployment of a roadmap to address these needs.
- **Facilitation and development of a Defence ecosystem at national level :**
  - bringing together and networking industrial, academic, and institutional stakeholders,
  - facilitating exchanges and collaborations,
  - structuring working dynamics within CAP4LAND.

### CAP4LAND WORKING GROUPS

CAP4LAND is structured around several thematic working groups covering the full spectrum of land forces capabilities :

Through these working groups, the Belgian Defence will identify priority projects to be carried out in line with its strategic objectives.

### WHY CAP4LAND ?

- Anticipate the future capability needs of Defence,
- Strengthen technological sovereignty,
- Unite a high-performing and innovative industrial ecosystem,
- Promote concrete and operational collaborations.

**CAP4LAND, a structuring framework for innovation and cooperation for land forces.**
